

Görkem Koç

Principal Specialist — System & Infrastructure

Ankara, Turkey · gorkem.koc@ops-center.org · cv.ops-center.org · linkedin.com/in/grkmkoc

PROFILE

System and infrastructure specialist with 7+ years in enterprise IT, currently Principal Specialist at Etiya after two promotions since 2021. I run hybrid identity across on-prem Active Directory and Microsoft 365 / Entra ID, manage the corporate endpoint estate with SCCM and ManageEngine, and keep business-critical services on VMware ESXi and Hyper-V resilient to a single-host failure. I translate ISO 27001 and PCI-DSS requirements into day-to-day operations and automate recurring work with Ansible and n8n. Completed the Architecting on AWS training in 2025, with a growing focus on hybrid and cloud infrastructure.

EXPERIENCE

Principal Specialist — System & Infrastructure

Etiya · Ankara | 2021 – Present | System Support Specialist (Nov 2021 – Feb 2023) → Senior Specialist, System Support (Feb 2023 – Aug 2025) → Principal Specialist (Aug 2025 – Present)

- **Automated repetitive work.** Built n8n automation flows for recurring Jira requests such as new-hire onboarding, access requests and system needs. Steps that used to be handled manually now run automatically, so the team spends less time on routine tickets.
- **Brought company computers under centralized management.** Security updates and application installs for every company computer are deployed centrally via SCCM and ManageEngine, so every device is updated under the same policy at the same time.
- **Kept the server infrastructure available.** Configured VMware ESXi and Hyper-V so that a single host failure does not disrupt the service, keeping business-critical systems available during the day.
- **Moved user-account and email management to a hybrid model.** Integrated on-prem Active Directory with Microsoft 365 / Entra ID so they behave as a single identity infrastructure. An employee logs in with the same username from the office or from home, and all access is revoked in one move when someone leaves.
- **Brought security and compliance standards into daily operations.** Translated ISO 27001 and PCI-DSS requirements into daily operations: access rights are clearly defined per system, CrowdStrike and Trend Micro EDR are rolled out across all devices, and suspicious events are followed up on.
- **Migrated DNS to AWS Route 53.** Moved the company's public DNS hosted zone from GoDaddy to AWS Route 53 and consolidated public DNS management on the AWS side.
- **Managed virtual servers on TTCloud.** Run the virtual servers in the TTCloud environment and automate their configuration and routine changes with Ansible, so setups stay consistent and repeatable.
- **Monitored the server estate.** Track servers with Grafana and FlowE to spot idle or underused machines and keep the environment efficient.

Software Support Staff

Akgün Bilgisayar A.Ş. — assigned to Çorum Chest Diseases Hospital | 2019 – 2021

- Monitored the Hospital Information System (HIS) and the underlying servers and addressed issues before they escalated, minimising disruption to the emergency and outpatient departments during the day.
- Set up regular backup policies with Veeam and Acronis and periodically tested that those backups could actually be restored, so data could be recovered after hardware failures.

HIS · Veeam · Acronis · Backup & restore testing

IT Manager

Apex Surgical Medical Center · Istanbul | Dec 2018 – May 2019

- Maintained the HP server and the Citrix environment running on it, through which users accessed shared applications from one place.
- Instead of installing the OS on every new computer one by one, built a network-based automatic deployment (WDS), so the same setup could be delivered to many computers at once.
- Segmented the local network into VLANs, separating patient-data traffic from guest/Wi-Fi traffic; the network became both safer and more orderly.

- Tracked the full hardware inventory, resolved incident tickets within target SLAs, and ran modernization projects for aging infrastructure components.

HP Server · Citrix · WDS · WSUS · VLAN · SLA

TECHNICAL SKILLS

Cloud & Microsoft 365	Microsoft 365 Management, Azure AD (Entra ID), Exchange Online, Teams, VDI, AWS Route 53, TTCloud
Windows Server	Active Directory (AD), GPO, DNS, DHCP, WDS, WSUS, PrintSrv, SCCM, ManageEngine, Windows Server 2012–2022
Virtualization & OS	VMware ESXi, Microsoft Hyper-V, KVM; Linux (RHEL / Ubuntu / CentOS), macOS
Security & compliance	ISO 27001, PCI-DSS, CrowdStrike, Trend Micro
Automation & tooling	n8n, Ansible, Grafana, FlowE, Jira / Confluence, Veeam, Acronis
