

Görkem Koç

Principal Specialist — System & Infrastructure

Ankara, Turkey · gorkem.koc@ops-center.org · cv.ops-center.org · linkedin.com/in/grkrmkoc

PROFILE

Systems and infrastructure engineer with 7+ years in enterprise IT, currently Principal Specialist at Etiya after two promotions in four years. I run hybrid identity across on-prem Active Directory and Microsoft Entra ID, manage the corporate endpoint estate with SCCM and ManageEngine, and keep business-critical services on VMware and Hyper-V resilient to host failure. I operationalise ISO 27001 and PCI-DSS requirements into day-to-day controls and automate recurring operations with Ansible and n8n. AWS-certified (Architecting on AWS, 2025) with a growing focus on hybrid and cloud infrastructure.

EXPERIENCE

Principal Specialist — System & Infrastructure

Etiya · Ankara | 2021 – Present | System Support Specialist (2021-23) → Senior (2023-25) → Principal (2025-)

- Integrated on-prem Active Directory with Microsoft 365 / Entra ID into a single identity plane, with centralised access management and immediate offboarding across the full identity lifecycle.
- Standardised security patching and application deployment across all corporate endpoints with SCCM and ManageEngine Endpoint Central, producing a consistent and auditable estate under one policy.
- Configured the VMware vSphere and Hyper-V environment behind internal applications to survive a single-host failure without service interruption.
- Automated onboarding, access provisioning and recurring system requests as Jira-triggered n8n workflows, removing manual steps and the human error that came with them.
- Operationalised ISO 27001 and PCI-DSS requirements: per-system access control, CrowdStrike and Trend Micro EDR across all devices, and automated detection and routing of suspicious events.
- Migrated the company's public DNS hosted zones from GoDaddy to AWS Route 53, consolidating all public DNS management in one place without a resolution outage.
- Manage virtual servers on TTCloud (Türk Telekom cloud) and automate configuration and routine changes with Ansible for repeatable provisioning.
- Monitor the server fleet with Grafana and FlowE, reclaiming idle and underused capacity to keep the environment lean.

Software Support Staff

Akgün Yazılım — on-site at Çorum Chest Diseases Hospital | 2019 – 2021

- On-site lead responsible for 24/7 availability of the hospital's entire IT infrastructure, above all the Hospital Information System (HIS) used by clinical staff.
- Proactively monitored the HIS and its servers, intervening before issues escalated to minimise daytime downtime in the ER and outpatient units.
- Established enterprise backup policies with Veeam and Acronis and ran periodic restore tests to guarantee data recoverability after hardware failure.

HIS · Veeam · Acronis · Disaster Recovery

IT Manager

Apex Surgical Medical Center · Istanbul | Dec 2018 – May 2019

- Managed a Citrix environment on HP server hardware, giving users centralised, controlled access to applications from a single point.
- Built network-based automated OS deployment with WDS, standardising endpoint provisioning and cutting setup time substantially.
- Segmented the LAN into VLANs, isolating patient-data traffic from guest and Wi-Fi traffic.

- Managed hardware inventory, resolved incidents within target SLAs and ran modernisation projects for ageing infrastructure.

HP Server · Citrix · WDS · WSUS · VLAN · SLA

TECHNICAL SKILLS

Identity & directory Active Directory, Microsoft Entra ID, hybrid identity, AD Connect / on-prem sync, FSMO, GPO, access management

Windows Server Windows Server 2012–2022, DNS / DHCP, WDS / WSUS, SCCM, ManageEngine Endpoint Central, failover clustering

Virtualisation & Linux VMware ESXi / vSphere, Hyper-V, KVM, TTCloud, Ubuntu, RHEL, CentOS, macOS

Cloud & hybrid AWS (Architecting on AWS), Route 53, Microsoft 365, Exchange Online, Teams, VDI

Security & compliance ISO/IEC 27001, PCI-DSS, CrowdStrike EDR, Trend Micro, patch management, access control

Automation & operations Ansible, n8n, Jira Cloud, Confluence, Grafana, FlowE, Veeam, Acronis, disaster recovery
